## INTRODUCTION

Backend developer with 6+ years of commercial experience. Last 5 years — key developer of the integration core in an international car rental platform: 40+ countries, 50+ providers, ~10,000 bookings/month. In a team of 2 backend developers, I own the full cycle — from designing integrations and writing code to testing, deployment, and production monitoring. Skilled at working with a legacy codebase (Ruby 2.3 / Rails 4, 10+ years old), adapting new functionality to existing architecture without full-scale refactoring.

## TECHNOLOGIES

Ruby 2.3–3.x   Rails 4 / 5   MySQL   PostgreSQL   Redis   ElasticSearch   REST API   SOAP / Savon  
Faraday   JWT / OAuth   XML / JSON   Docker   Docker Compose   QEMU   Capistrano   Git  
GitLab CI/CD   RSpec   Sidekiq   Telegram Bot API   Linux   Nginx   SAP ABAP

## EXPERIENCE

### Backend Developer — International Car Rental Platform

2021 — Present

*Scale: 40+ countries, 50+ rental providers, ~10,000 bookings/mo. Team: 2 backend devs + product manager. Codebase: 10+ years old, Ruby 2.3 / Rails 4, monolith.*

### RESPONSIBILITIES

- Full provider integration cycle: design, development, testing, deployment, monitoring — no dedicated QA or DevOps
- Collaboration with technical teams of 20+ providers across 12+ countries: API contract negotiation, staging debugging, escalating provider-side bugs
- Adapting new features to legacy architecture (10+ years old): fitting into existing patterns without global refactoring
- Production incident investigation and resolution: log analysis, staging reproduction, same-day hotfixes
- Mentoring product manager on technical aspects of API integrations

### ACHIEVEMENTS

- Integrated 20+ providers (REST and SOAP APIs) across 12+ countries — each with unique protocol, data format, and business logic
- Built integration framework (Gateway, Request, Transformer, Rate) — reduced new provider onboarding from 3–4 weeks to 1 week
- Developed rate merging system for 50+ providers with internal catalog of 5,000+ cars (pricing, deposits, franchises, extras)
- Found and fixed Redis token concurrency bug — bookings were created with wrong dates during parallel searches (~50 req/sec)
- Implemented Redis caching for auth tokens and search results — reduced provider API load by 40%

- Implemented configurable search timeouts across 40+ countries — reduced timeouts in Greece and Turkey by 60%
- Built Telegram booking notification system with auth, routing to 3 recipient groups, and data formatting from 50+ providers
- Created deploy notification microservice (Ruby + Docker): auto-changelog from GitLab API, MR grouping, Telegram delivery
- Set up legacy Ruby 2.3 / Rails 4 dev environment on ARM (Apple Silicon) via Docker + QEMU for the entire team (10 people) — cross-compilation, custom image builds, RubyMine debugger integration
- Integrated ElasticSearch (Chewy) for full-text search across 5,000+ cars and 2,000+ locations catalog

**Stack:** Ruby on Rails 4, MySQL, Redis, ElasticSearch, Docker, Faraday, Savon, Capistrano, GitLab CI/CD, RSpec, Telegram Bot API

## Field Specialist / SAP Consultant — Schlumberger

2017 — 2020

Artificial Lift division. International oilfield services company, 80,000+ employees.

- SAP ERP support for 500+ artificial lift equipment units
- Custom ABAP reports for logistics automation — reduced manual processing by 30%

## SAP Consultant — Energy Consulting / Tatneft

2013 — 2015

- SAP ERP implementation and support (LO, SD, MM modules) for 200+ users

## EDUCATION

---

### Higher Technical Education

Major: Automation of Technological Processes and Production

## LANGUAGES

---

Russian — native | English — technical documentation, written communication with providers

## KEY SKILLS

---

Ruby, Ruby on Rails, RoR, Backend, API Integration, REST, SOAP, XML, JSON, Redis, MySQL, PostgreSQL, ElasticSearch, Docker, CI/CD, GitLab, RSpec, TDD, Sidekiq, Capistrano, Faraday, Savon, JWT, OAuth, Telegram Bot, Linux, Nginx, SAP, ABAP, Agile, Remote, Legacy Code, Refactoring, Microservices, Monolith, Concurrency, Caching, Full-stack, DevOps
